About This Content

Smokebox, which has brought "Old West" railroading to full life in Train Simulator, now adds to the experience – with Central Pacific's 1860s-era 4-6-0 "Buffalo!"

Constructed by the Rogers Locomotive & Machine Works in 1868, Central Pacific's "Buffalo" class included five steam locomotives. Largely based on Rogers standard 4-4-0 design (of which one notable example was Union Pacific No. 119), the "Buffalo" was equipped with an extra set of driving wheels, making it a 4-6-0 "Ten-Wheeler" – and a locomotive well-suited to battle the steep grades of Central Pacific's crossing of California's Sierra Nevada Mountains.

CPRR's Buffalo-class locomotives were wood burners, equipped with balloon smoke stacks housing large spark arrestors made from hardware cloth. Representing "big" power in the late 1860s, the 4-6-0s featured 18" x 24" cylinders, 57-inch drivers (with tires), and produced 13,000+ pounds of tractive effort. With an extra set of driving wheels (as compared to a 4-4-0), the Buffalo-class Ten-Wheelers had less space to fit the valve gear and crosshead pumps, leading to a cramped appearance in the area just behind the cylinders. But nonetheless, dressed out in a vibrant Russia-iron, black, red, and green livery, the husky Ten-Wheelers were handsome steam locomotives.

The "Buffalo" 4-6-0 will provide everything from the challenges of stoking a wood-burning fire and managing injectors and boiler steam pressure to throttle lag and dealing with authentic wheel slip. With numerous interactive and animated elements, the "Buffalo" is remarkable in its realism. Smokebox provides expert and simple operating modes that make the locomotive accessible and enjoyable for all users.

Joining Central Pacific No. 82, the "Buffalo," is sister locomotive CPRR No. 86, the "Gorilla," as well as two new types of

period rolling stock – a CPRR wooden boxcar and caboose-coach. The "Buffalo" pack also features three enjoyable career scenarios set on Smokebox's captivating and immersive Cheyenne 1869 route (as included in the "Union Pacific No. 119 Steam Loco Add-On" DLC, which is available as a separate purchase).

The Central Pacific Ten-Wheeler "Buffalo" is now available for Train Simulator – and the classic locomotive will provide countless memorable "Old West" railroading experiences!

Included Scenarios

Three captivating career scenarios for the CPRR 4-6-0 on the Smokebox Cheyenne 1869 route are provided (the route is included in the Union Pacific No. 119 Steam Loco Add-On):

- [Buffalo] Boxcars Westward

- [Buffalo] Gorilla in the Mist

- [Buffalo] Hot Box

Please Note: Union Pacific No. 119 Steam Loco Add-On **is required, as a separate purchase, in order to play the scenarios featured in this add-on.**

More scenarios are available on the Steam Workshop online and in-game. Train Simulator's Steam Workshop scenarios are free and easy to download, adding many more hours of exciting gameplay. With scenarios being added daily, why don't you check it out now!

Key Features

- Central Pacific Railroad 4-6-0 No. 82, the "Buffalo"

- Sister Buffalo-class locomotive No. 86, the "Gorilla"

- Highly realistic controls and operating characteristics

    - Handbrakes on rolling stock controlled by whistle commands, simulating the communication between the locomotive engineer and the brakemen riding the cars

    - AI locomotives blow their whistles appropriately when starting, stopping and backing up

    - Braking without the aid of air-brakes, using a combination of handbrakes and cylinder compression braking

    - Detailed simulation of throttle, reverser, valve gear, firebox, boiler and steam chest, including the effect of opening and closing the admission and exhaust valves as well as the cylinder drains

    - Realistic simulation of operational errors such as hydraulic lock of the throttle, condensation build-up in the cylinders, reverser "slam" when releasing the reverser latch while too much pressure on the valve gear, or degradation of cylinder packing glands caused by stresses on pistons and rods

    - Outside mounted lifting injector

- Crosshead-driven feedwater pump

- Bell, fully animated (including clapper and rope) with simulated momentum

- Animated mechanical control linkages from the cab controls to Stephenson's valve gear, ash pan, injector, crosshead pumps, cylinder drains, sanders and whistle

- Animated pilot pulling bar and tender handbrake rigging

- Authentic adhesion and wheel slip physics

- Realistic fire, sparks, smoke, steam, water and sanding effects

- Automatic stoking to maintain the desired fire mass controlled with an easy-to-use pop-up slider inside the firebox

- Opening cab doors, windows and water manhole lid

- Realistic sounds throughout, including chugging sounds that depend on the exhaust steam pressure and length of valve cut-off

- Multiple camera views including track-level close-up of the Stephenson's valve gear in action

- Customisable smoke density, track conditions, headlight shadow-casting, crew presence and control difficulty, via key combinations

- Snow textures in winter

- Key-activated in-game performance report giving data such as average and max speed attained, distance travelled, weight and length of consist, etc.
- Extraordinary visual detail and authenticity

- Choice of difficulty settings

  - Compatible with Expert and Simple Controls gameplay train controls.

  - Compatible with default auto fireman as well as manual firing.

  - Compatible with HUD.
- CPRR wooden boxcar

- CPRR caboose-coach

- Three career scenarios for Cheyenne 1869 route

- Quick Drive compatible

- Download size: 175.5mb

Title: Train Simulator: CPRR 4-6-0 Buffalo Steam Loco Add-On
Genre: Simulation
Developer:
Smokebox
Publisher:
Dovetail Games - Trains
Franchise:
Train Simulator
Release Date: 4 Oct, 2018

English

Another amazing creation from Smokebox! Looks amazing. My only issue is there is no sound for the bell and whistle.. Once again Smokebox has set the bar on quality for Railworks content. If you want top of the line quality in both form and function, you can't get better than a Smokebox locomotive. This is both a beautiful work of art to look at as well as a history lesson in it's accuracy as you learn how to operate it correctly. Smokebox puts the "sim" in Train Simulator.. Elegant masterpiece indeed. Another well build locomotive , challenging and very good looking.

I commend this locomotive with no doubt, very good and a must have.. Another amazing locomotive from Smokebox! Visually beautiful and a fun challenge to drive. Brilliant! Difficult a must have well done Smokebox "Proper Job" Cornish saying. How does one improve on perfection? Smokebox has with this add-on. Building on an already cutting edge collection of mid-19th Century stock, Smokebox now takes a look at what North American railroads began to do when looking for larger power to tackle longer trains and steeper grades. This add-on also includes yet further improvements to the brake scripting which mitigates the long-standing "sliding bug" that affected uncoupled stock.

Value for money, this is probably my first choice of all add-ons. If you're looking for a real challenge, start here to experience an early and important chaplter of the dawn of the Railway Age. You'll find the interest grows on you before you realise it.
